DESCRIPTION

- **"V" port balls** are ideal for achieving more precise control with the simplicity and sealing features of the ball valve.
- **The "V" port gives a better flow** characteristic that is easier to control.
- **"V" port valves offer better and more consistent control** than traditional ball valves with round port.
- **The 30° option allows for finer tapered control throughout the valve rotation** and the 60° offers a larger Cv in addition to controlled flow.
