

## PRESSURE REDUCING VALVE RP45 (EN)

### DESCRIPTION

The ADCA RP45 series pressure reducing valves are single seat bellows sealed controllers, operating without auxiliary energy, designed for use on steam, compressed air, industrial inert gases and liquids compatible with the construction.

They are particularly suitable for reducing steam pressure in all energy and process systems where pressures should be kept constant.

### OPERATION

Pressure reduction is achieved by means of variable throttling of the inlet flow at the valve seat by variation of the flow area between seat and disc. The outlet pressure which is transmitted through the feed-back line to the diaphragm or piston chamber counteracts the spring force acting on the valve spindle and controls the valve aperture corresponding to the spring setting and thus to the required outlet pressure.

### MAIN FEATURES

Specially designed high durability bellows, providing pressure balancing and friction less plug stem.

Robust construction (fit-and-forget).

Suitable for use with high pressure turndowns.

Interchangeable actuators

### OPTIONS:

Soft sealing for steam  
Nitrile rubber soft seated version for air and gas applications where tight shut-off is required.  
Low-noise flow divider

### USE:

Steam, compressed air and other gases and liquids compatible with the construction.

### AVAILABLE

#### MODELS:

RP45G and RP45GT or N – PN16 SG iron  
RP45S and RP45ST or N – PN16 Cast steel  
RP45S and RP45ST or N – PN40 Cast steel  
RP45I and RP45IT or N – Stainless Steel  
(All wetted parts free of ferrous metal or in St.Steel.).

Suffix T : Soft seated with PTFE/GR

Suffix N : soft seated with nitrile rubber

### SIZES:

DN 15 to DN 150

### CONNECTIONS

RP45G Flanged EN 1092-2 PN16

RP45S or I Flanged EN 1092-1 PN16 - PN40

### INSTALLATION:

Horizontal installation.

An "Y" strainer, steam separator and steam trap should be provided upstream the valve.

See IMI, installation and maintenance instructions.

Actuator reference without suffix in cast iron, suffix S in cast steel, suffix SS in stain steel.

We reserve the right to change the design and material of this product without notice.

**Correction factors:**

The given capacities apply to the pressure reducing valves at **critical pressure drop** (downstream pressure in barg about 58% of the upstream pressure barg or lower). In case of **non-critical pressure drop** a correction factor must be used as follows:

No correction factor should be used for smaller pressure ratios than 0.7.

PRESSURE RATIO * P2 / P1	CORRECTION FACTOR f
≥ 0,7	1,25
≥ 0,8	1,6
≥ 0,9	2,25

\* Pressure ratio in bar abs (barg + 1)

**Superheated steam:**

If superheated steam is to be reduced instead of saturated steam a correction factor has to be applied as well, the required mass flow must be multiplied by the following factor:

$$\frac{V_h}{V_s}$$

where V<sub>h</sub> = specific volume of superheated steam and V<sub>s</sub> = specific volume of saturated steam .

**HOW TO SIZE ( using table for steam )**

**Example (valve selection) :** Saturated steam capacity: 300Kg/h; Upstream pressure: 3 bar; Downstream pressure required: 2bar.

**Solution:** First determine correction factor for pressure ratio:  $\frac{2+1}{3+1} = 0.75 \rightarrow f = 1.25$ ,

Then multiply the given capacity:  $300 \times 1.25 = 375 \text{ Kg/h}$

Go to 3 bar in the column “bar” of the capacity table. By following the horizontal line you can find out the values for selection of pressure reducing valve. Looking for an equal or higher value than 375 Kg/h. In this case it will be 400 Kg/h. Now, go to the top of the table and read off the nominal size: DN32

On the actuator and spring selection table, for downstream pressure of 2 bar we may see that the recommended actuator is type A-2, considering the valve supplied with spring Nr.60.

**How to order:** RP45G DN32 PN16 valve complete with spring Nr.60, type A-2 actuator, condensate vessel and copper tube impulse line.

**HOW TO SIZE (using Kvs):** please consult formulas on IS PV10.00 E or consult factory.

**INSTALLATION RECOMMENDATIONS**

RP45 is designed primarily for steam, compressed air and non inflammable gases. It has limited use for neutral liquids since the plug close in the same direction of the fluid flow, which can produce vibrations and water hammer when used at less than 20% of capacity. To avoid this, valve can be installed with the fluid direction against the plug under certain conditions. Please consult the factory.

At service conditions where the temperature is more than 100°C it is necessary to protect the diaphragm against overheating by using a seal pot.

Never size the valve according to the pipe diameter in which it has to be fitted but according to the required actual flow .Pipe sizing must also respect the maximum recommended flow velocities according to the medium.

**INSTALLATION**

**Service conditions less than 100°C:** with gases the valve is ready to work. In case of liquids the actuator must be filled completely with liquid, so, the vent screw (12) should be open till the water flow without bubbles.

The valve can be installed with the diaphragm pointing upwards or downwards.

**Service conditions more than 100°C:** Fill the seal pot (11) using a funnel (14) until the water emerges from the actuator vent (12) without bubbles .Close the actuator vent screw (12) and proceed filling the pot until the water reaches the top and close it with the plug. The valve is now ready to work.

The valve must be installed with the diaphragm pointing downwards.

Downstream pressure should be adjusted with the key (13). Compressing the spring, spring force increase and downstream pressure increase. Relaxing the spring, spring force decrease and downstream pressure decrease.

The valve closes when the downstream pressure rises.

DN 15 – DN100

DN 125 – DN150

### Typical Installation

MATERIALS		
POS.	DESIGNATION	MODEL
1	Pressure reducing valve	ADCA RP45
* 1A	Water seal pot	POT
2	Humidity separator	ADCA S 25
3	Steam trap	ADCA FLT series

11	Coil	ADCA GSC-40
12	Gauge cock	ADCA GC-400
13	Upsteam pressure gauge	ADCA MAN-100
14	Downstream pressure gauge	ADCA MAN-100

\* Not necessary when in operation with low temperature compressed air or water.

POT detailed information: see IS POT.10 E 07.13

**Remarks:**

**By-pass:** if overpressure can not be accepted the use of by-pass is not recommended. In alternative, for critical process, two pressure reducing stations should be installed in parallel.  
 PN ratings and materials according to the operating pressures.

\* The balance pipe connection is recommended to enter downstream pipe at a minimum of 1 meter from valve. Installation instructions are available (IMI-RP45) and typical assembling drawing. Special assembling designs may be produced on request.
